

2011~ (11-405)

Project Name:	<i>Project for Urban Transport Planning in Municipality of Phnom Penh</i>		
Country:	Cambodia		
Status:	Associate Firm	Leading: METS Research & Planning Associate 1: Oriental Consultants Associate 2: Tonichi Engineering Consultants	
Project Duration:	Current Year	Start Date:	End Date:
FY2011	1 st Year	2012.2.27	2014.6.30
FY	2 nd Year (Final)		
Assignment Description:			
<p>As a result of the rapid economic growth in Phnom Penh, with a population of 1.35 million, the number of registered vehicles has been increasing quickly. Due to the growth in vehicle number, traffic congestion and accidents have become serious problems.</p> <p>JICA had conducted an urban transport study and urban transport improvement project in order to tackle the traffic problems. Based upon the result of this study and project, traffic signals have been installed and traffic intersections have been improved to clear up the traffic problems. Nevertheless, the introduction of public transportation has not been realized yet. In spite of such efforts, these countermeasures could not produce decisive efforts because of rapid urban dynamics such as suburbanization, expanding of administrative area and large-sized urban development by private investors. In such circumstances, this project will extend to making a comprehensive urban transportation master plan with a time horizon of 2035 and conducting a pre-feasibility study of priority projects. In addition, recommendations will be provided with regard to the strengthening of the implementation system and capacity development of the Cambodian government in order to enforce the study results and improve the understanding of transport policies defined by the project.</p>
